# FRANCO'S LEMON CHEESE®

60% SATIVA - 40% INDICA

THC: 21.58    CBD: 0.6    CBN: 0.19

 Super Lemon Haze x  
 Exodus Cheese.

 9-11 weeks 750 g/m<sup>2</sup>.

 Very lemony smell with the typical  
cheese taste on the exhale.  
It is a very powerful high, very  
social and energizing.

 9-11 weeks 1000 g/plant.  
1<sup>th</sup> week of November.

 Not yet introduced.

## DESCRIPTION

After the tragic loss of Franco Loja beginning of 2017 the world has been waiting for a strain dedicated to Franco.

The strain that would represent Franco the best could only be his very last cross of two of his favourite plants: The multiple cup winning Super Lemon Haze and the famous Exodus Cheese.

We are happy to finally release this strain, not only in honour of Franco but also because a part of the sales of this strain will be donated by the Green House Seed Company to the Strain Hunter's Foundation – Franco Loja Fund which has been set up in order to collect money from donations and sales to ensure that Franco's children have a secure educational future.

The plant grows tall with a strong main stem and long branches. The buds are round, medium sized and rock hard, covered in resin.

The flowering time of Franco's Lemon Cheese is 9-11 weeks with a production of up to 750g per square meter.

Outdoors it finishes early November in the northern hemisphere and can reach a production of 1000g per plant. Branches might need support for the heavy buds.

It can take a medium to strong feeding regime with EC values up to 2.2 in hydroponic systems and 1.8 in soil.

We always recommend to flush the medium a few times during the cycle and for 10-14 days at the end of the flowering period.

Franco's Lemon Cheese is producing very dense buds covered in resin. The smell is very lemony with hints of Cheese in the background. When smoking the Cheese flavor is becoming more dominant on the exhale.

The effect is very powerful, hitting fast and resulting in a very social and energizing high.

# HOLY PUNCH®

60% **SATIVA** - 40% **INDICA**

**THC:** 20.17

**CBD:** 0.8

**CBN:** 0.46

The Church x Grape.

8-9 weeks 800 g/m<sup>2</sup>.

Strong indica effect, at first that evolves in a very social high later. Very complex flavor, spicy and sweet at the same time.

8-9 weeks 800 g/plant.  
2<sup>nd</sup> week of October.

Not yet introduced.

## DESCRIPTION

Holy Punch is a cross of one of our classics, The Church which is famous for its outdoor performance and sweet flavor, and a very special Grape male that adds a spicy taste and creates a very special terpene profile.

The plant is medium-sized and grows bushy, the long branches might need support during the flowering period to hold the heavy buds. It is good for SCRoG or LST.

The flowering time of Holy Punch is 8-9 weeks, it can be harvested commercially after 8 weeks but one more week will allow the plant to develop the full flavor and increase resin production.

Outdoors Holy Punch will finish around mid October in the northern hemisphere and can produce up to 1000g per plant. It grows bushy and has a good resistance to mold and pests which makes it ideal for humid areas.

Holy Punch prefers a moderate feeding regime in soil but can be taken to higher levels up to 2.0 in hydroponic systems.

We always recommend to flush the medium a few times during the cycle and for 10-14 days at the end of the flowering period.

Holy Punch produces hard golfball sized buds covered in resin, when grown to its full potential the buds look like they have a coating of blue resin which creates a very good bag appeal.

The smell is very fruity with a bit of spice in the background that might remind of haze without the speedy head rush.

The effect is very strong in the beginning and evolves in a very social high.

# SWEET VALLEY KUSH®

20% SATIVA - 80% INDICA

THC: 22.39

CBD: 0.5

CBN: 0.05

Afghan Kush x Hindu Kush

8-9 weeks 750 g/m<sup>2</sup>.

Strong, intense sativa high, combined with a powerful body-stoned feeling that does not want to leave for long time.

8-9 weeks 1000 g/plant.  
1<sup>st</sup> week of October.

Not yet introduced.

## DESCRIPTION

Sweet Valley Kush is an Afghan Kush that originates from the Hindu Kush region near the border of Afghanistan and Pakistan.

Sweet Valley Kush is a short plant, very well suited for SoG. Plants can turn very dark during the end of flowering period and the buds are covered in resin.

The flowering time is 8-9 weeks. It will reach the full flavor and effect in the last week. For best results we recommend to let it go the full 9 weeks.

Outdoors Sweet Valley Kush will finish early October in the northern hemisphere and production can reach up to 1000g per plant.

The small size of the plant makes it ideal for guerrilla growers who want to hide the plants between bigger ones.

Sweet Valley Kush produces very dense buds covered in resin. It is not the most commercial plant but the quality of the final product is outstanding.

The sweet taste reminds of berries and has a earthy kush background on the exhale. It creates a very relaxing effect that lasts long and is very effective in pain therapy, appetite stimulation and against insomnia.
