JACK'S DREAM

Jack Herer x A.M.S. 30% sativa - 70% indica

The Jack's Dream is a cross of two of our classics from the Green House Seeds catalogue:

The Jack Herer for its amazing frosty flowers and piney haze terpene profile, and the A.M.S, our most resistant strain to fungus/mould, but also one of the sweetest strains with some earthy background taste on the exhale.

The combination of the two parents produced an amazing compact plant. Which has a beautiful steady structure, full of branches and short internode length. Jack's Dream is perfect for places with little roof space. It produces dense flowers that are covered in trichomes.

The smell of the flowers is a perfect mix of the pine tree sap and pepper notes from the Jack Herer with an earthiness and sweetness from the A.M.S, balancing the piney terpenes, resulting in a great combination.

The effects are very relaxing and balanced, not a heavy hitter on the body due to the Sativa genetic. It is a good strain to keep active and creative.

DARK PHOENIX

Trainwreck x Jack Herer 60% sativa - 40% indica

The Dark Phoenix is a cross of the famous Californian cut Trainwreck, a reference during many years for medicinal use, mixed with the equally famous and mythical, Jack Herer.

The plant grows relatively tall but still moderate for an indoor grow, with the use of topping for the lower spaces. The stretch of the Dark Phoenix is very vigorous during the first weeks of flowering and will produce strong branches that will catch up on the sides to form on a nice crown effect.

The smell of the Dark Phoenix is a complex mix of flavours of the Jack, combined with the pungent smell of the Trainwreck, which bring some lemony spiciness to the sativa mix.

The effects are a balance of the relaxing body effect from the Trainwreck with the uplifting effect from the Jack Herer that will keep your head clear and creative.

A good day smoke to keep working.

CHEMICAL BRIDE

Wedding Cake x Chemdog 30% sativa - 70% indica

The Chemical Bride is a combination of our Chemdog genetic from Greenhouse Seeds, with our selection of one of the big boomers in America from Seedjunky, the Wedding Cake.

The result is an amazingly compact flower production that is covered in glittering trichomes down to the leaves.

The plant will not stretch a lot once switched into flower. It will grow in a bushy shape with strong secondary branches with short internode length. A nice dark forest green colour often happens on the leaves, just like its father the Chemdog can have.

The smell/taste of the Chemical Bride is a complex mix of both parents. It has a strong creamy smell inherited by the Chemdog, then followed by some sour/gassy tones, almost like a OG smell.

The effects of the flowers are very body relaxing and will last for quite a while, it will not produce a couchlock effect but more like a floating sensation. A great smoke for creative/active people.

KING'S JUICE

Mimosa x King's Kush 60% sativa - 40% indica

The King's Juice is a combination of two of Arjan's favourite terpene profiles.

On one side our selected Mimosa from Symbiotic genetics, and on the other side our famous King's Kush. What came out is an outstanding plant with a beautiful coney/piney type of growth. It has a long main cola that will grow a bit higher than the sides and allow the secondary branches to make a beautiful crown around it.

The plants will have some stretch during the flowering time, you can expect it to double in size during the first weeks of flower. The King's Juice will have steady branches and vigorous growth. The flowers have an amazing smell that perfectly balance the floral scent of the mimosa with an extra citrusy/earthy touch from the Kush ancestors, that reminds you of fresh fruit juice.

Most of the plants will have some beautiful reddish/violet hues toward the end of the flowering cycle.

The effects are perfectly balanced for an all day smoke, with a nice uplifting head buzz. The body stays light and active and the taste remains in the mouth for a while after exhaling.

VELVET MOON

Dosidos x Holy Punch 40% sativa - 60% indica

The Velvet Moon is the result of our selection of the famous Dosidos from USA. We crossed it with the Holy Punch, one of Franco's last breeding projects.

The result is a great vigorous and amazingly aesthetic plant, with a very potent sweet smell.

The stretch is moderate, perfect for indoor and outdoor growers. It has very strong branching and can hold steady without support until the end of flowering.

The smell is a perfect balance of both parents. It has the pungent sweetness of fresh fruit with perfect maturation of the holy punch, combined with some acid lemony and earthiness aromas from the dosidos.

The effects are long lasting and very fast hitting on the head during the first minutes, then they slowly fade down to give you a great buzz.

HOLY SNOW

Hawaiian Snow x Holy Punch 70% sativa - 30% indica

The Holy Snow is a new project where we mixed Hawaiian Snow(Arjan's favourite plant) with Holy Punch (one of the last creations from our beloved Franco)

The result is a vigorous and homogeneous plant with a beautiful sativa structure. The plant will double in size during the flowering stretch. Holy Snow has a Christmas tree shape with mid-sized internodes full of preflower. The flowers are very compact and have the typical shape of the iconic Hawaiian snow fox-tailing flowers.

The aroma is a blend of the great Hawaiian Snow's specific fried onion smell with the extreme fruity sweetness of the Holy Punch which smells like a basket of matured fruit.

The effects are great for an all-day smoke, thanks to the uplifting clear head effect from the sativa lineage combined with some giggling happiness from the Holy Punch. The effect is not too heavy on the body.

BANANA KRUMBLE

Banana Punch x OG Kush 30% sativa - 70% indica

Banana Krumble is one of our latest additions to the catalogue for 2020.

We selected the Banana Punch for its smell and flavour of overripe bananas and cinnamon. We crossed it with our selected OG Kush to bring back the gassy fuel like flavour.

Banana Krumble grows very short with thick overlapping fingers and only starts to stretch in late veg and early flower. It can tolerate moderate to high nutrient feedings and will produce high yields.

The compact buds will need support during the last weeks of flowering. The buds are dense and covered in resin, making it an ideal strain for extractions.

The effect is very strong on the body and long lasting, making Banana Krumble the ideal nightcap strain.

BUBBA SLUSH

Bubba Kush x Gelato 30% sativa - 70% indica

Bubba Kush being a classic from California and Gelato being the new kid on the block. Bubba Kush quickly became the people's favourite, not only in the USA but all over the world. We crossed the original pre '98 Bubba Kush with a reversed Gelato, which we selected in a extensive phenotype hunt a few years back.

The outcome of this cross is the best of both worlds, creating one of the sweetest strains ever produced. Combining the heavy dark chocolate and coffee like flavours of the Bubba Kush, with the gassy creaminess of the Gelato.

The plant grows short and bushy with massive leaves and overlapping fingers. Buds are very dense and compact and are covered in thick trichomes. It may show amazing colors towards the end of the flowering period of around 9 weeks.

The effect is heavy on the body, while keeping the mind clear.

CLOUD WALKER

Punta Roja x Mendo Breath 70% sativa - 30% indica

The Cloud Walker is a cross that we made with our selected pheno of the Punta Roja, which we found during our Strain Hunters expedition in Colombia in 2013.

Punta Roja is a very famous landrace from Colombia. It's well known for its red colours with large amounts of resin production, and the extreme psychedelic high it produces.

We have crossed this amazing landrace, with our selection of Mendo Breath x Purple Punch from Inhouse Genetic. The result is a shorter flowering time and plant size. Cloud Walker is a new hybrid that combines original landrace genetics with a Mendocino flagship strain.

The flavour profile ranges from tropical citrus flavours to sweet earthy vanilla and caramel taste, creating a very complex bouquet.

The effect is very uplifting at first, It can be slightly psychedelic due to the tropical landrace influences of the Punta Roja but will fade into a more body effect later on.

KONG'S KRUSH

Banana Punch x Wonder Pie 30% sativa - 70% indica

Kong's Krush combines the incredible banana and cinnamon flavours of our Banana Punch with the creamy and gassy flavour of the Wonder Pie.

The plant is medium sized and bushy, with very vigorous growth and large side branches reaching the same height as the main cola.

The Wonder Pie influences shortened the flowering time and increased yield, which makes this strain the ideal plant for commercial production. It has tight frosty flowers and amazing bud formation making it a very aesthetic plant.

The effect is very narcotic and well suited for pain management.

WONDER PIE

Wedding Cake x OG Kush 30% sativa - 70% indica

Wonder Pie is a cross of the popular Wedding Cake with our selected OG Kush.

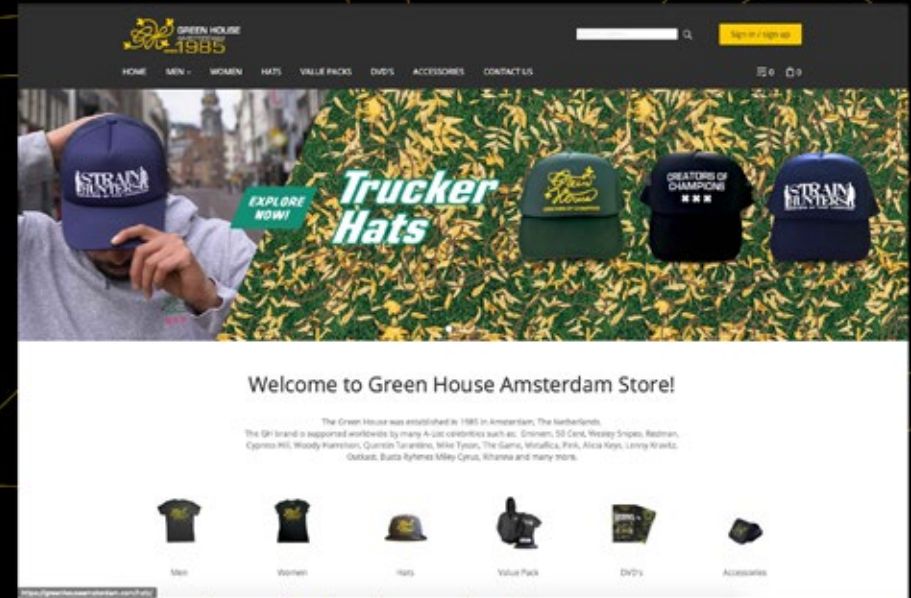

The flavour goes from fruity-sweet to gassy, making it an all-round strain.

The influence from Girl Scout Cookies is dominant, while the OG Kush flavour comes through on the exhale.

The plant grows tall and will double in size during the flowering period and should be topped and trained to maximize yield.

The buds are covered in trichomes and are long and very dense.

The effect is balanced, making it an ideal strain for day and night.
